Title: Perfect score: US-09-001-039A-47

Sequence: MQIELSTCFFLCLLRFCFSA......WVHQIALRMEVLGCEAQDLY 1457

Scoring table: BLOSUM62

Searched: 122810 seqs, 40065486 residues

PIR\_60:\* pir1:\* pir3:\*

score and is ŝŢ No. is the number of results predicted by chance to have a greater than or equal to the score of the result being prime derived by analysis of the total score distribution. being printed,

coagulation factor V precursor - human
coagulation factor V precursor - human
C;Species: Homo sapiens (man)
C;Date: 19-May-1989 #sequence\_revision 02-Jun-1995 #text\_change 31-Oct-1997
C;Accession: A56172; A42344; A28028; A27498; A25897
C;Accession: A56172; Moore, K.D.; Kane, W.H.
Biochemistry 31, 3777-3785, 1992
A;Title: Structure of the gene for human coagulation factor V.
A;Reference number: A42344; MUID:92232668
A;Accession: A56172
A;Molecule type: DNA

```

A; Title: Determination of the disulfide bridges in factor Va heavy chain. A; Reference number: A55979; MUID:95034740
A; Contents: annotation
A; Note: 566-Cys and 617-Cys were shown to have free sulfhydryls
C; Comment: Factor V is activated by thrombin and partially by coagulation for the file of the following states and shown to have free sulfhydryls
C; Function:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             C; ACCESSION.

hemocytin - silkworm

N;Alternate names: humoral lectin
C;Species: Bombyx mori (silkworm)
C;Date: 28-Oct-1996 #sequence_revision 07-Feb-1997 #text_change 17-Mar-1999
C;Accession: S52093; S70920
R;Kotani, E; Yamakawa, M.; Iwamoto, S; Tashiro, M.; Mori, H.; Sumida, M.; Matsubara, F, Biochim. Biophys. Acta 1260, 245-258, 1995
A;Title: Cloning and expression of the gene of hemocytin, an insect humoral lectin which A;Reference number: S52093; MUID:95178544
PAccession: S52093
R;Molecule type: mRNA

BIOL. CHEM. 269:8639-8641(1994).

-!- FUNCTION: FACTOR VIII, ALONG WITH CALCIUM AND FAS A COFACTOR FOR FACTOR IXA WHEN IT CONVERTS FACTIVATED FORM, FACTOR XA.

-!- SUBCELLULAR LOCATION: EXTRACELLULAR.

-!- SUBCELLULAR LOCATION: EXTRACELLULAR.

-!- SUBCELLULAR LOCATION: EXTRACELLULAR.

-!- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EAC 2 PLASTOCYANIN-LIKE REPEATS.

-!- SIMILARITY: STRONG, TO COAGULATION FACTOR V.

WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.

-!- SUBUNIT: FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.

-!- SUBUNIT: FACTOR VA IS COMPOSED OF AN HEAVY CHAIN AND OF A LIGHT CHAIN NONCOVALENTLY BOUND. THE INTERACTION BETWEEN THE TWO CHAINS IS CALCIUM-DEPENDENT.

-!- DOMAIN: DOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA REPEATS.

-!- PTM: THROMBIN ACTIVATES FACTOR V PROTEOLYTICALLY TO THE ACTIVE COFACTOR, FACTOR V(A) (FORMATION OF A HEAVY CHAIN AT THE N-TERMINUS AND A LIGHT CHAIN AT THE C-TERMINUS).

-!- DISEASE: OWREN PARAHEMOPHILIA, AN HEMORRHAGIC DIASTESIS, IS DUE TO A DEFICIENCY OF FACTOR V. OTHER DEFECTS IN F5 RESULTS IN A FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APCR MUTATION IS FOUND IN ABOUT 5% OF THE POPULATION WHICH SUGGEST THAT A SLIGHT THROMBOPHIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL IMPLANTATION.

-!- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF 2 PLASTOCYANIN-LIKE REPEATS.

-!- SIMILARITY: STRONG, TO COAGULATION FACTOR VIII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VARIANT APCR GLN-534.

MEDLINE; 94217810.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1872
                                                                                                                                                                                                                                                                                                                                                                           GUINTO E.R., ESMON C.T., MANN K.G., MACGILLIVRAY R.T.;
"The complete cDNA sequence of bovine coagulation factor V.";
J. BIOL. CHEM. 267:2971-2978(1992).
-!- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES
WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.
-!- SUBUNIT: FACTOR VA IS COMPOSED OF AN HEAVY CHAIN AND OF A LIGHT
CHAIN NONCOVALENTLY BOUND. THE INTERACTION BETWEEN THE TWO CHAINS
                                                                                                                         This SWISS-PROT entry is copyright. -!- FUNCTION: CERULOPLASMIN IS A BLUE, COPPER-BINDING (6-7 ATOMS PER MOLECULE) GLYCOPROTEIN FOUND IN PLASMA. FOUR POSSIBLE FUNCTIONS ARE FERROXIDASE ACTIVITY, AMINE OXIDASE ACTIVITY, COPPER TRANSPORT AND HOMEOSTASIS, AND SUPEROXIDE DISMUTASE ACTIVITY.

-!- CATALYTIC ACTIVITY: 4 FE(2+) + 4 H(+) + O(2) = 4 FE(3+) + 2 H(2)O.

-!- COFACTOR: BINDS 6 CU-IONS PER MOLECULE.

-!- COFACTOR: THIS PROTEIN BELONGS TO THE MULTICOPPER OXIDASES WHICH CONTAIN THREE DISTINCT CU CENTERS KNOWN AS TYPE 1 OR BLUE, TYPE

2 OR NORMAL, AND TYPE 3 OR COUPLED BINUCLEAR.

-!- TISSUE SPECIFICITY: SYNTHESIZED IN LIVER AND SECRETED INTO THE

RAT Ceruloplasmin. Molecular cloning and gene expression in live choroid plexus, yolk sac, placenta, and testis.";

RL J. BIOL. CHEM. 262:2875-2878(1987).

C -:- FUNCTION: CERULOPLASMIN IS A BLUE, COPPER-BINDING (6-7 ATOMS MOLECULE) GLYCOPROTEIN FOUND IN PLASMA. FOUR POSSIBLE FUNCTION ARE FERROXIDASE ACTIVITY, AMINE OXIDASE ACTIVITY. COPPER TRANS.

C --- FUNCTION: MAY ALSO PLAY A ROLE IN FETAL LUNG DEVELOPMENT OR PULMONARY ANTIOXIDANT DEFENSE.

--- COFACTOR: BINDS 6 CU-IONS PER MOLECULE.

--- COFACTOR: THIS PROTEIN BELONGS TO THE MULTICOPPER OXIDASES WHIC CONTAIN THREE DISTINCT CU CENTERS KNOWN AS TYPE 1 OR BLUE, TYPE 2 OR NORMAL, AND TYPE 3 OR COUPLED BINUCLEAR.

--- TISSUE SPECIFICITY: SYNTHESIZED IN LIVER AND SECRETED INTO THE PLASMA. ALSO CHOROID PLEXUS, YOLK SAC, PLACENTA, AND TESTIS; NOT INDUCTION: BY INFLAMMATION.

--- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF 2 PLASTOCYANIN-LIKE REPEATS.

"Ceruloplasmin gene expression in the murine central nervous system.";

J. CLIN. INVEST. 98:207-215(1996).

-!- FUNCTION: CERULOPLASMIN IS A BLUE, COPPER-BINDING (6-7 ATOMS PER MOLECULE) GLYCOPROTEIN FOUND IN PLASMA. FOUR POSSIBLE FUNCTIONS

CC ARE FERROXIDASE ACTIVITY: AMINE OXIDASE ACTIVITY. COPPER TRANSPORT

CC AND HOMEOSTASIS, AND SUPEROXIDE DISMUTASE ACTIVITY.

CC -!- CATALYTIC ACTIVITY: 4 FE(2+) + 4 H(+) + O(2) - 4 FE(3+) + 2 H(2)O.

CC -!- CATALYTIC BINDS 6 CU-IONS PER MOLECULE.

CC -!- COFACTOR: THIS PROTEIN BELONGS TO THE MULTICOPPER OXIDASES WHICH

CC COTACIN THREE DISTINCT CU CENTERS KNOWN AS TYPE 1 OR BLUE, TYPE

CC -!- TISSUE SPECIFICITY: MANY TISSUES, INCLUDING LIVER, EYE AND BRAIN.

CC -!- TISSUE SPECIFICITY: MANY TISSUES, INCLUDING LIVER, EYE AND BRAIN.

CC -!- SIMILARITY: CONTAINS 3 F5/8 TYPE A DOMAINS; EACH IS COMPOSED OF

CC 2 PLASTOCYANIN-LIKE REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Q61147;
